NepDora – QA Testing Report

1. Project Information

Field	Details
Project Name	NepDora
Website	https://www.nepdora.com/
Testing Type	Manual Functional & UI Testing, API Testing, Performance Testing
Testing Tools	Postman, Apache JMeter
Environment	Production
Tester	Bikash Mehta
Testing Period	September 2026
Testing Status	Completed

2. Testing Scope

The NepDora website and admin dashboard were tested to verify functionality, user interface, form validations, navigation, major user flows, selected APIs, and basic API performance.

The testing covered:

- Functional testing
- UI testing
- Form and field validation
- Login and registration
- Navigation and buttons
- Admin dashboard
- Main admin modules
- Payment / checkout flow
- Responsive UI checks
- API testing using Postman
- API performance testing using Apache JMeter

- Final regression testing

Testing was performed using safe test conditions. No real payment transactions or destructive production actions were performed.

3. Modules Tested

#	Module	Status
1	Homepage	Completed
2	Login	Completed
3	Forgot Password	Completed
4	Registration	Completed
5	Dashboard	Completed
6	Order Management	Completed
7	Carts / Abandoned Carts	Completed
8	Products	Completed
9	Payment / Checkout	Completed
10	Services	Completed
11	Content Management	Completed
12	Inquiries	Completed
13	Settings	Completed
14	API Testing	Completed
15	API Performance Testing	Completed
16	Final Regression Testing	Completed

4. API Testing

Selected NepDora APIs were tested using **Postman**.

The API testing covered:

- Login API
- Valid and invalid credentials

- Required-field validation
- Dashboard-related API
- Plans API
- Authentication and authorization checks
- HTTP status-code validation
- API response validation

API Testing Summary

Test Area	Result
Valid Login API	200 OK – Pass
Invalid Login	400 response with appropriate error – Pass
Required Field Validation	400 response – Pass
Dashboard API	Response received – Pass
Plans API	200 OK – Pass
Unauthorized API Access	401 Unauthorized – Pass

5. Performance Testing Using Apache JMeter

Apache JMeter was used to perform a basic performance test on a selected Dashboard API.

Test Scenario

Dashboard API – 10 Concurrent Users

Metric	Result
Concurrent Users	10
Average Response Time	204 ms
Minimum Response Time	159 ms
Maximum Response Time	282 ms
Error Rate	0%

The test completed with a **0% error rate** under the tested 10-user load.

This was a basic API performance/smoke test and was not intended to represent a full-scale load, stress, or endurance test.

A payment-related API was also tested during JMeter testing and produced an error response. The result was recorded for further investigation.

6. Overall Result

The major modules and important user flows of NepDora were tested through manual testing. Selected APIs were tested using Postman, and basic API performance testing was performed using Apache JMeter.

Overall, the main functionality of the tested areas was working as expected.

During testing, I identified **5 functional/UI issues**, including minor UI/content issues, functional/validation issues, and a responsive UI issue.

The identified issues were documented with their reproduction steps, expected result, actual result, severity, priority, and type.

No critical issue was identified during the documented testing.

7. Bugs / Minor Issues Found

B-01 – Typographical Error in Website Templates

Issue:

The word **"Ecoomerce"** is displayed instead of **"Ecommerce"**.

- **Severity:** Low
- **Priority:** Low
- **Type:** UI / Content

B-02 – Grammar Issue in Testimonial Heading

Issue:

The heading **"Loved by Nepali Businesses Owners"** is grammatically incorrect.

Expected:

The heading should use grammatically correct wording, such as **"Loved by Nepali Business Owners."**

- **Severity:** Low
- **Priority:** Low
- **Type:** UI / Content

B-03 – Phone Number Field Accepts Alphabetic Characters

Issue:

The Phone Number field accepts alphabetic characters such as **abcxyz** and allows the form to be submitted.

Expected:

The field should reject alphabetic characters and display an appropriate validation message.

- **Severity:** Medium
- **Priority:** Medium
- **Type:** Functional / Validation

B-04 – Incorrect Validation Message for Empty Email

Issue:

When the Email field is left empty on the Login page, the application displays **"Invalid email address."**

Expected:

The application should display **"Email is required."**

- **Severity:** Low
- **Priority:** Low
- **Type:** Functional / Validation

B-05 – Header Controls Not Fully Accessible at Tablet Resolution

Issue:

At approximately **768 × 1024** tablet resolution, some header controls such as **Help** and **Profile** are outside the visible viewport.

Expected:

All important header controls should remain visible and accessible at tablet resolutions.

- **Severity:** Medium
- **Priority:** Medium
- **Type:** UI / Responsive

8. Final Testing Status

Overall Status: COMPLETED

The major NepDora modules and key user flows were tested. Selected APIs were tested using Postman, and basic API performance testing was performed using Apache JMeter.

The application was generally functional across the tested areas.

A total of **5 issues were identified and documented**:

- **2** UI / Content issues
- **2** Functional / Validation issues
- **1** Responsive UI issue
- **0** Critical issues identified

The Dashboard API performance test with 10 concurrent users recorded an average response time of **204 ms** with a **0% error rate**.

After the identified issues are fixed, a follow-up regression test can be performed to verify that the fixes have been successfully implemented.
